Reflection

In written paragraph format (max. 1 page) describe the artistic and technical intention behind the sketch. Reflect on the process of experimentation. Use the following questions as a guide:

1. **What was your artistic concept?** - *What is your concept? What is your relation to it, your understanding of it, or your interpretation of it? Do you need to provide definitions of your working concept or describe it's relevance to particular personal, sociopolitical, or artistic concerns for it to be understood?*
2. **What techniques did you explore and why?**- *How does your technical approach respond to your motivations and concept? What technical processes did you use to create the sketch and how do they work?*
3. **Reflect on what you learned.** - *How does your experimentation build on or complement what we've been learning in class? How will this benefit your studio projects? How did your experimentation go? What was challenging? Do you feel like you understand the technique you explored now? How would you like to move forward with it with developing this technique?*
